

- It must not claim that cached/parsing-assisted results are authoritative.

There is no single universal state-management system. Feature maintainers must identify the actual

historical cutoff records

public/data/ contains high-volume KCET and COMEDK cutoff artifacts, additional cutoff variants, course

or payment data unnecessarily.

'VITE_OPENROUTER_API_KEY'

- Node.js 18+; Node.js 20 LTS is recommended for operating consistency.

Payment verification issue | Stop reporting payment success, reconcile provider state, preserve safe logs

- Supabase migrations, RLS or client database permissions.
